

Full Stack Developer Test

Thank you for your application to MVF.

To support your application, we ask that you complete the following exercise. This gives us a chance to see your approach to solving problems and some of your code on a clean build project. Although the problem is simple do treat it as a real feature request and provide work you would be happy to maintain on a long-term basis. There is no set time-limit.

When you are ready to send us your solution, please fill in the the following form <https://forms.gle/Tt79CBEkQJWLRXT77>.

We wish you the very best of luck and look forward to hearing back from you. If you have any questions about the test, please feel free to get in touch.

Github (API) test

We would like you to build a web or command line application, which should allow users to enter an arbitrary Github username, and be presented with a best guess of the Github user's favourite programming language.

This can be computed by using the Github API to fetch all of the user's public Github repos, each of which includes the name of the dominant language for the repository.

Documentation for the Github API can be found at <https://developer.github.com/v3/>

You may use any programming language, framework, or library.
